

Miscellaneous Hydraulic Pumps & Motors

Miscellaneous products can cover a multitude of sins, but basically if the Unit is a hydraulic piston pump or motor and we can obtain spare parts then we are ready to use our expertise to undertake a repair. Some of the units pictured on this page are non-standard units or have been manufactured by companies not so popular in the western world. Take the UCHIDA range, we carry stock parts for types AP2D and A10VD pumps fitted to many different midi excavators such as Hitachi, Kobelco, JCB, Sumitomo and Cat. Also Hitachi pumps type HPV116, 125 & 145 fitted to EX200, EX300 type excavators, we keep parts in stock!!!

We at Heavyparts are proud of the versatility of our workforce, not being allied to just one product line means the company as a whole has to be totally flexible in the way we work, from receiving a unit to sourcing parts and information to rebuilding and testing, over twenty years of trading says it all!
